# TRAILER SAFETY CHAINS

**Peerless Trailer Safety Chains** meet the requirements of SAE standard J684 for trailer couplings, hitches, and safety chains used in conjunction with all types of trailers or towed vehicles whose Gross Vehicle Weight Rating (GVWR) does not exceed 4540 kg (10,000 lbs). Safety Chains are the system (linked chains and attachment means, or other) that provide a secondary means of connection from the rear of the towing vehicle to the front of the trailer. The Safety Chain's mission is to retain the connection between the towing vehicle and trailer in the event of a ball or coupler failure, ensuring the vehicle can still safely maintain control and guide the trailer to a safe stopping point.

**PLEASE NOTE:** It should not be interpreted that safety chains can ensure that vehicle control or connection will be maintained in the event of vehicle incidents such as loss of control, rollover, jack knife, collision, etc.
